

## ABSTRACT

The present invention relates to a polymerizable acrylate compound represented by the general formula (1):

- 5 (in the formula, R<sup>1</sup> represents a hydrogen atom, halogen atom, hydrocarbon group or fluorine-containing alkyl group, R<sup>2</sup> and R<sup>3</sup> may be different or identical, and each of them independently is a hydrogen atom, fluorine atom, hydrocarbon group optionally branched, fluorine-containing alkyl group, 10 aromatic group, or cyclic structure containing an aliphatic group and may contain oxygen or carbonyl bond) and a polymer compound obtained by using the same.
